Owner's Manual

Version

2.0

Thank you for choosing the Barrette Outdoor Living Fence. Please read the instructions completely before assembling your fence. Retain manual and your dated sales slip for future reference and warranty claims.

Before You Begin...

Check your local zoning laws.

- Local zoning laws and Home Owners Associations may regulate the location, style and height of your fence or even require a permit signoff beforehand.

Contact your local utilities companies.

- You must have the utility companies clearly mark your property for electrical, gas or water lines to avoid puncturing any unseen underground utilities.

Pay to mark your property line.

- Being proactive will save you time and money from any disputes from neighbors.

Product Overview:

Product Overview:

1 Mark the fence location using string and line stakes.

2 Dig post holes 12" in diameter 36" deep. Use the Center to Center measurements of the fence model being installed for the Center to Center Post Distance. If a fence panel is being used that is less than the width of a full panel, or if posts are being used other than 5" in width, measure the width of the panel and add the width of one post, that will be the Center-to-Center post distance of the holes.

3 If frost line exceeds 30" dig hole to the appropriate depth and then add 6" of gravel for post drainage. Add concrete according to manufacturers instructions until a depth of 30" remains. Set post in hole ensuring it is plumb and level. Fill hole with concrete according to manufacturers instructions. Go to step 5.

4 If frost line does not exceed 30", insert 6" of gravel into bottom of both holes then set post in ground ensuring it is level. Ensure first post is plumb and level and then add concrete according to manufacturers instructions.

- 5** For Build-It-Yourself panel, insert aluminum into bottom rail, then insert bottom rail into bottom post route hole of first post only. Proceed with inserting all rails into first post.

- 6** Starting from the left side, insert pickets/boards down through the top rail. Finish by locking pickets/boards into bottom rail.
Note: Scalloped and Arched panels have pickets/boards that are numbered. Start from left side with the #1 picket/board first.

- 7** Insert the completed fence panel into the route holes of the second fence post. Plumb and level the post and add concrete according to manufacturers instructions.

- 8** Check to ensure the second post is level, then add panel width plus one half the width of your post. This will locate the center of your next hole. Then dig the third post hole accordingly.

9

Repeat process from steps 2 to 9 until all fence panels and posts have been installed.

10

Apply glue on inside rim of post caps then attach to posts.
